

Development of a Tourism Website Using Artificial Intelligence for Itinerary Recommendation

RATIONALE :

Existing platforms lack personalized recommendations tailored to individual preferences. Therefore, this project aims to apply AI to generate smart and personalized travel itineraries, helping users plan trips more efficiently and conveniently.

EXPECTED OUTCOMES:

- ★ Develop a travel website focused on tour management using modern technologies such as Next.js and Supabase.
- ★ Integrate AI to generate personalized travel itineraries based on user preferences.

RESULTS ACHIEVED:

- ★ Developed a full-featured travel website with user authentication.
- ★ Enabled tour booking and personalized itinerary creation.
- ★ Built an admin dashboard for managing users, tours, and system data.
